WebScope local fixture assessment

Executive Summary

Assessment: WebScope local fixture assessment

Target: http://127.0.0.1:9998/

Status: COMPLETED

44 automated observations; 1 analyst-confirmed findings.

Severity distribution (excluding dismissed/false-positive): CRITICAL: 0, HIGH: 2, MEDIUM: 5, LOW: 15, INFO: 22

This report distinguishes observed facts from analyst conclusions. It does not claim comprehensive vulnerability coverage.

Scope

Authorization: I own the loopback WebScope fixture and authorize bounded read-only collection.

Methodology

Explicit, scoped, rate-limited read-only collection; deterministic passive analysis of persisted evidence.

GET/HEAD/OPTIONS only. No credential attacks, authentication bypass, exploitation, or target data modification.

A single execution budget covers collection operations and redirects. Errors and limits are recorded in the timeline.

All stored evidence and exports are redacted. Body hashes describe collected bytes, possibly truncated.

TLS results describe only observed certificates and negotiated protocols, not exhaustive protocol support.

Severity weight 0-4 x confidence (LOW .5, MEDIUM .75, HIGH 1), plus internet .5, production .5 and no authentication .25 for non-informational findings; capped at 4. Thresholds: LOW >0, MEDIUM >=1.75, HIGH >=2.75, CRITICAL >=3.75. Impact is described, not given an invented independent score. Overrides never alter original facts.

Remediation Recommendations

WS-HDR-001: Constrain script/resource origins with a tested Content-Security-Policy.

WS-HDR-003: Set X-Content-Type-Options: nosniff.

WS-HDR-004: Use CSP frame-ancestors or X-Frame-Options to restrict framing.

WS-HDR-005: Set a deliberate Referrer-Policy, such as strict-origin-when-cross-origin.

WS-HDR-006: Restrict browser features that this application does not require.

WS-HDR-007: Consider same-origin opener isolation where compatible.

WS-HDR-008: Choose a resource policy appropriate to intended cross-origin use.

WS-CK-001: Set Secure on session cookies and serve the application over HTTPS.

WS-CK-002: Set HttpOnly unless client-side access is explicitly required.

WS-CK-003: Choose Lax or Strict where possible; SameSite=None requires Secure.
